

FINAL REFLECTION

- The first and most complicated problem I had to face was with the labeling and training web portal for Form Recognizer, it wasn't able to connect to blob storage. I spend many hours trying to figure out how to solve that problem. I deleted the storage and re-create everything in order to make it work.
- Finally, I had some problems trying to connect with my blob storage for retrieving the flight manifest. After some research I could connect to the service.
